EXPERIENCE

Garmin (Python, Django, Laravel, Vue.js, MySQL, Docker, AWS IoT MQTT, Java, JavaScript, Jenkins)

Taoyuan, Taiwan

Software Engineer Intern

Jul 2024 - Jun 2025

- Built a three-phase permission management system with Laravel, Vue.js, Tailwind, MySQL, and Docker, cutting manual approval workflows by over 90% for a 350-person team
- Integrated with Garmin LDAP, Jira REST API, and SMTP to auto-generate quarterly Jira tickets across 5–6 platforms, reducing creation time from 20–30 min to under 1 min
- Eliminated synchronous SMTP blocking by offloading email dispatch to Laravel Queue with Supervisor-managed workers, reducing send latency from 5s to 1s
- Built the MVC backend with Python Django and MySQL, deployed behind Nginx as reverse proxy and static file server, publishing targeted and broadcast MQTT messages to AWS IoT via AWS CLI
- Implemented the Android head-unit client in Java to subscribe to AWS IoT MQTT, validating a WiFi-based alternative to a US\$3,000 hardware MQTT module per vehicle
- Automated daily timecard compliance reminders for the 350-person AOEM team with Python, Jenkins, and SMTP, querying an internal HTTP API to identify under-logged employees and cutting manual emails from 30+ to under 10 per month

SELECTED PROJECTS

Course Career Planner (Go, JavaScript, PostgreSQL/pgvector, Gemini API, Redis, Docker)

Mar 2026 - May 2026

- Built a career-oriented course recommendation system for NTUST, a university, with Go, JavaScript, PostgreSQL/pgvector, Gemini, Redis, and Docker
- Scraped 1,000+ course pages from NTUST with Go and staged data through a Redis queue using a Producer-Consumer pattern
- Processed queued data concurrently with a Go worker pool, enriching and embedding course content via Gemini API into PostgreSQL with pgvector
- Controlled Gemini API call rate with a token bucket rate limiter, allowing 10 requests per minute for enrichment and 100 RPM for embedding
- Built a JavaScript search frontend with a REST API and Gemini-powered RAG pipeline for semantic career-to-course matching

Meeting Room Reservation System (Django, Python, JavaScript, jQuery, Bootstrap)

Dec 2021 - Jan 2022

- Contributed full-stack features to a Django system managing 6 rooms × 13 hourly slots, with backend APIs and server-side conflict detection, cutting booking time 18% versus manual Google Calendar scheduling
- Developed frontend booking and edit views with JavaScript, jQuery, Bootstrap, and a datetime picker

EDUCATION

Texas A&M University

College Station, TX

Master of Computer Science

Aug 2026 - Present

National Taiwan University of Science and Technology

Taipei, Taiwan

Bachelor of Science in Computer Science and Information Engineering

Sep 2019 - Jun 2023

Cumulative GPA: 4.01/4.3 (3.83/4.0)

2x Dean's List

SKILLS

Languages: Go, Python, PHP, Java, JavaScript, SQL

Backend: Laravel, Django, REST APIs, MQTT, RAG

Databases: PostgreSQL, pgvector, MySQL, Redis

Tools: Docker, AWS (IoT, CLI), Nginx, Jenkins, Git
